Summary

Computer Science Engineering undergraduate specializing in Artificial Intelligence and Machine Learning with hands-on experience in software development, Python, and the Frappe Framework. Strong foundation in data structures, algorithms, OOP, backend development, and machine learning, with experience delivering software solutions and managing freelance projects.

Technical Skills

Languages: Python, C, Java, JavaScript **Frameworks:** Frappe Framework, Django, Flask
Web: HTML, CSS, JavaScript **Backend:** Python, REST APIs, Business Logic
Database: SQL, Database Management **AI/ML:** Machine Learning, CNN, Neural Networks
Core: Data Structures, Algorithms, Algorithm Analysis, OOP **Tools:** Git, GitHub, VS Code, PyCharm

Experience

SDE Intern – BWH **Jun 2026 – Aug 2026**

- Worked with **Python and the Frappe Framework** on software development and application customization.
- Contributed to backend functionality, application business logic, and Frappe-based development workflows.
- Gained practical experience in developing and customizing business applications using the framework.

Freelance Developer **Jun 2019 – Jun 2026**

- Developed Python and C-based scripts and small-scale software solutions for client requirements.
- Automated workflows, applied debugging and clean coding practices, and managed projects from requirements through delivery.

Marketing Team – E-Club Hyderabad **Dec 2023 – Jan 2025**

- Contributed to marketing initiatives and promotional activities as part of the E-Club Hyderabad team.

Projects

Invoice Generator – Python, HTML, CSS

- Developed a web-based invoice generation system with user authentication and a dedicated database for each user.
- Enabled users to create and manage invoices and convert them into downloadable PDF documents.
- Implemented user-specific data management to keep invoice records separated between accounts.

Code Quality Analyzer Tool – Python

- Developed a Python tool to analyze code efficiency and algorithmic complexity.
- Designed modular backend-processing components and automated detection of redundant operations.

Trading Bot – Python, Binance Futures Testnet

- Developed a Python-based automated trading bot for executing and managing trades through the Binance Futures Testnet API.
- Implemented programmatic order execution and automated trading logic using API integration.

CNN Image Classification Model

- Built and trained a CNN for image classification with preprocessing pipelines and evaluation metrics.
- Optimized model performance through iterative tuning and explored API-based deployment.

Education

B.Tech – Computer Science Engineering (AI & ML) Aug 2023 – Aug 2027
GITAM Deemed University

Higher Secondary Education Apr 2017 – Apr 2023
Krishna Public School, Raipur

Certifications

- **Software Engineer** – HackerRank, Apr 2026
- **Walmart USA – Advanced Software Engineering Job Simulation** – Forage, Feb 2026
- **Deloitte Australia – Cyber Job Simulation** – Forage, Feb 2026
- **Google Play Academy – Store Listing Certificate** – Jun 2025
- **Algorithms for Searching, Sorting, and Indexing** – University of Colorado Boulder, Jun 2025
- **Introduction to Python Functions** – University of Colorado Boulder, Jun 2025
- **Programming for Everybody (Getting Started with Python)** – University of Michigan, Jun 2025
